

## **CoMeT Solutions to Preview New Product at PTC/User® World Event**

*CoMeT will preview its upcoming solution for multi-solver assembly simulations integrated with Pro/ENGINEER®*

**Albuquerque, NM, May 24, 2006** – CoMeT Solutions, Inc. (CSI or CoMeT), a developer of software used to enable simulation-driven engineering, will preview its new product as an exhibitor at the PTC/User® World Event 2006 held June 4-7, 2006 at the Gaylord Texan Resort near Dallas, Texas. A PTC Partner Advantage™ Gold member, CoMeT will demonstrate how Pro/ENGINEER users can get more work out of their analysis tools and significantly extend the value of Pro/ENGINEER in their multi-solver assembly simulations using CoMeT software. CoMeT ensures bi-directional associativity between Pro/ENGINEER Wildfire and CAE data from a variety of vendor tools.

CoMeT's Pro/ENGINEER integrated application for multi-solver assembly simulations is in beta implementation with leading automotive, aerospace and consumer products manufacturers. It will be available for commercial release later this year.

“Moving Pro/ENGINEER assembly models and data to and from analysis systems is tedious, time-consuming, and fraught with errors. Automating engineering processes using those systems together has been just as difficult. CoMeT brings together Pro/ENGINEER along with all your CAE tools under a single roof. A normally complex, multi-vendor CAE process, such as rigid body analysis of an assembly or flexible body dynamics, is accomplished rapidly and easily within the CoMeT work environment,” said Malcolm Panthaki, founder and chairman of CoMeT Solutions.

The PTC/User World Event is an international technical conference serving users of software produced by PTC® of Needham, Massachusetts. Over 2,000 professionals from over 400 different companies are expected to be in attendance at this year's event.

### **About CoMeT Solutions, Inc.**

CoMeT Solutions, Inc. ([www.cometsolutions.com](http://www.cometsolutions.com)) provides software-based solutions that accelerate innovation by enabling virtual product engineering. CoMeT software provides a single coherent work environment in which engineers can define and solve complex engineering problems – using virtually any CAE and CAD application – and manage all related models, processes and resulting simulation data. CoMeT integrates all CAE data using its innovative Universal Engineering Model (UEM™) that was developed and tested with partners including the Air Force Research Labs, Sandia National Labs, and NASA. Based in Albuquerque, New Mexico, CSI is a privately held company that was incorporated in 2001.
